The portal **www.mladiinfo.eu** was created in 2008 by a group of young Macedonians, motivated by their own positive international experiences, who committed themselves to helping other young people improve their education, meet new cultures and develop their skills through experience.

Today, Mladiinfo International is a network of organizations from 6 European countries who are working hard to present students and young professionals with the best free educational and professional development opportunities.

10 busy writers and 7 teams in different CEE countries are making sure that our **website is updated on a daily basis**, featuring opportunities that are not only visible, but digested and re-written, by the hands of people who have the right eyes, words and filters to make all that **content appealing and understandable** for young people!

Our expertise and worthy capital lies in our **preparation, selection of news and posting.** On our journey so far, we have seen, met, visited and collaborated with many organisations and web portals who were eager to feature our content on a certain section of their websites. It took us a while to come to that stage, but here we are!

In the back of an HTML code and weblink that is opened **200.000 times/month**, there is a whole journey, story and a lot of smiles. We decided to spread that!

Now, Mladiinfo officially opens its sources, knowledge and experience to everyone interested: three different plugins will enable you to plug-in to the world of **free education opportunities**.

So, choose the content in the size and shape that best suits your website!

This special plugin will bring reliable and free information on educational opportunities for your students, staff or members, your network or community directly to your website. It is **free of charge and flexible in terms of size and shape**, which can be easily adjusted to match the website dimensions.

By interactively contributing to the transfer of knowledge, it will increase the engagement of the visitors on your website and provide them with an added value in form of timely and quality information.

The Mladiinfo plugin is available for download **here**.
